

1 ABSTRACT OF THE DISCLOSURE.
2

3 The present invention composition is a nonflammable petrolatum-based
4 synthetic lubricant which includes an extreme pressure additive for additional lubricating
5 properties. The composition comprises, in percent by weight: approximately 4% carbon
6 dioxide, as a propellant; approximately 0.125% SARKOSYL O; approximately 0.125%
7 AMINE O; approximately 78% to approximately 81% trichloroethylene, approximately
8 10% to approximately 20% petrolatum; approximately 0.44% methyl salicylate, and
9 approximately 0.5% to approximately 5% MONALUBE 225®. Preferably the
10 composition of the present invention comprises approximately 1.5% MONALUBE 225®,
11 and between approximately 78% to approximately 81% trichloroethylene.
